

# Value transformations applied to $g(x) = x^2$ on $[-100, 100]$

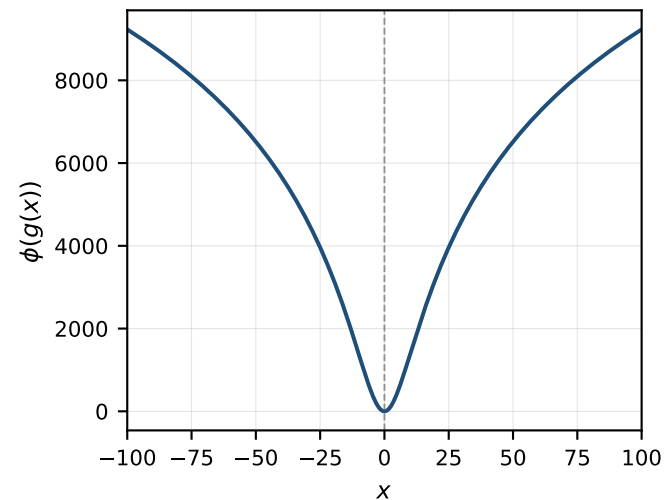

Linear:  $\phi(u) = u$

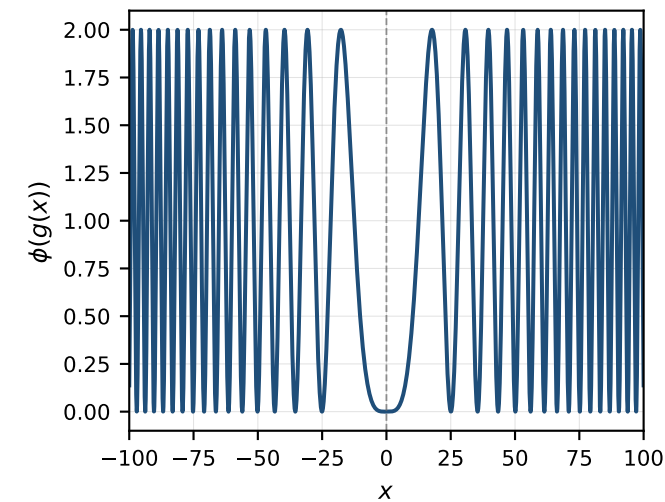

Power:  $\phi(u) = u^2/10^4$

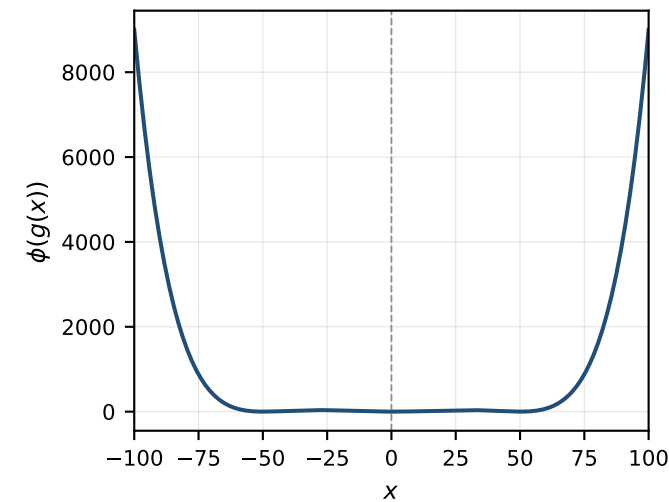

Log:  $\phi(u) = 2000\log(1 + 0.01u)$

Cosine:  $\phi(u) = 1 - \cos(0.01u)$

Repeated optima:  $\phi(u) = u(u - 2500)^2/6.25 \cdot 10^7$

Oscillatory:  $\phi(u) = u(1 + 0.45\sin(0.02u))$
